e. Other Locational Data: (e.g., parcel #, directions to res	source, elevation, etc., as appro	priate)				
The section of the PG&E High	Voltage Transmission Line	is located approximately 11	.15 miles east of Hwy 680 on the Beyer Ranch				
property, APN: 99A-1610-001-0	9. From I-680, take Valleci	tos Road/Hwy 84 exit (east)	and continue to Holmes Street. Take a right				
onto Holmes Street (northeast)	and travel approximately	1.3 miles to Concannon Blvd	. Turn right on Concannon Blvd. (east) and				

onto Holmes Street (northeast) and travel approximately 1.3 miles to Concannon Blvd. Turn right on Concannon Blvd. (east) and travel approximately 2.25 miles to Tesla Road. Turn right (east)on Tesla Road and travel approximately 2.25 miles to the Beyer Ranch property located adjacent to the south side of Tesla Road.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) The PG&E double-footed high-voltage transmission line first appears on 1949 aerial photographs. The PG&E transmission line and distribution system was originally designed as a one-way channel that delivered electricity from the point of generation to the point of consumption. The double-footed PG&E high-voltage transmission line is supported by steel lattice towers. It is unkown but considered highly likely that the transmission line has been previously recorded, although not at this location.

*P3b. Resource Attributes: (HP9 electrical line)
